

KIWOCLEAN[®] S 912

Screen degreasing concentrate (max. 1:50)

KIWOCLEAN S 912 is a highly concentrated, acidic degreasing concentrate. Diluted up to 1:50 with water, the ready-to-use cleaning solution has excellent degreasing and wetting properties and is suitable for any mesh type. KIWOCLEAN S 912 has especially been developed for automatic screen washing units. It produces little foam and is a phosphate-free tenside combination for the removal of grease and dirt.

APPLICATION

In general, mix 50 l of water with 1 l of KIWOCLEAN S 912. The concentration can be adapted depending on the degree of contamination. We recommend filling in the water first and then add the degreasing concentrate whilst stirring. KIWOCLEAN S 912 dissolves quickly and clearly and does not form any residue. The ready-to-use solution does not block nozzles, pipes or pumps. Observe the instructions given by the machine manufacturer. Screens which have been treated with KIWOCLEAN S 912 must be rinsed with clear water.

Optimum parameters can be programmed into the washing unit by our technical staff if required.

PRODUCT DATA

Colour:	beige to yellow
Consistency:	medium viscous
Density (20°C):	approx. 1,07 g / cm ³
ph-value:	approx. 4,0, after dilution in a ratio of 1:40: approx. 4,4

HEALTH HAZARDS/ ENVIRONMENTAL PROTECTION

Observe the usual precautions when working with chemicals (wear safety goggles and gloves).

KIWOCLEAN S 912 complies with the requirements of legislation for detergents and is biodegradable. In usual working dilution no waste water problems have to be expected. For reasons of environmental protection no dyes or perfumes are added.

STORAGE

2 years (at 20 – 25°C and original container)
