

## Improved Formulation for TPGL 130 / 926

White blends containing very small amounts of TPGL 130 and/or TPGL 926 occasionally shifted colour after the baking process due to the red pigment contained. The replacement of the pigment now fully restores the colour stability.

The new formulations excel with higher temperature resistance, especially in white blends.

### Colour deviation

Deviation of the dE value, compared to the previous formula:

TPGL 130: 2,2

TPGL 926: 2,7

For further information on Tampa® Glass TPGL please refer to [www.marabu-inks.com](http://www.marabu-inks.com)

### Date of Change-Over

This change becomes effective starting with batch 802 (immediately). You will find an additional remark on the label stating:

**„Attention: Improved Formula“**
