

Changed Pigmentation starting with Batch 014

Due to a discontinued raw material, the colour shade 934 of our low-migration ink series Ultra Pack UVFP will be re-formulated with a new pigment (Force majeure).

Colour Deviation

Compared to the original formula, the deviation of the dE-value on white substrates is > 3 at full colour, and thus beyond the existing tolerance. This deviation was unavoidable since the range of raw materials suited for low migration requirements is rather limited. Technical properties such as printability and flow are not affected by the pigment exchange.

Custom Inks

Repeat orders of affected custom inks may be delivered with a slight delay as the formulations have to be revised.

For further information on Ultra Pack UVFP please refer to the Technical Data Sheet on www.marabu-inks.com

Date of change-over

This change becomes effective starting with **batch 014** (immediately). You will find an additional remark on the label stating:

„Attention: Modified Pigmentation“
